

YASH OMPRAKASH LIMBHORE

ASPIRING AGENTIC AI & DATA SCIENCE ENGINEER

 yashlimbhore@gmail.com  (+91) 8055706858  github.com/Yash020605  linkedin.com/in/yash-limbhore

EDUCATION

B.E. (AI & Data Science)
Ajeenkya DY Patil School of Engineering, Pune
Expected Grad: 2027

XII (HSC)
Don Bosco Highschool & Jr. College, Pune
Pass: 2023

X (CISCE)
Dr. Mar Theophilus School, Pune
Pass: 2021

SKILLS

Languages:
Python, TypeScript, JavaScript, SQL

AI & Automation:
Autonomous Agents, Multi-Agent Orchestration (LangGraph), Prompt Engineering, n8n, Google Antigravity, Make, API Integration

Frameworks:
Next.js 16, React, FastAPI, Streamlit, Flask, Scikit-learn, NumPy, Pandas

Databases & Tools:
PostgreSQL, Vector Databases, Git/ GitHub, Cursor, Docker, Lovable

CERTIFICATIONS

- Gen AI Workshop: Build Your Own Model – NXT Wave
- AI Automation Explorer & Builder – Make Academy
- Mastering Google Antigravity – Analytics Vidhya
- Fundamentals of Agents – Hugging Face

INTERESTS

- Multi-Agent Orchestration
- Hardware-Optimized Edge Computing
- Mobile Photography & Aesthetics

PERSONAL

DOB: 17/11/2007
Languages: English, Hindi, Marathi

CAREER OBJECTIVE

Highly motivated Artificial Intelligence & Data Science undergraduate specializing in rapid system deployment through No-Code/Low-Code AI orchestration and Autonomous Multi-Agent workflows. Experienced in constructing enterprise-ready full-stack automation, robust optimization frameworks, and deterministic LLM routing.

PROFESSIONAL EXPERIENCE

Agentic AI Intern Dec 2025 – Jan 2026
TechGeek Connect

- Orchestrated stateful multi-agent workflows using LangGraph and n8n to automate complex data retrieval tasks, optimizing development velocity.
- Integrated autonomous agent nodes with backend automation tools to scale pipeline deployment efficiency.

Prompt Engineering Intern Jan 2026 – Feb 2026
TechnoHacks

- Engineered tailored system instructions and few-shot prompt templates to drastically minimize LLM hallucination rates.
- Collaborated on tuning model inference boundaries to guarantee context-aware, deterministic outputs for enterprise use cases.

ACADEMIC PROJECTS

AreoVibe AI: Drone-Based Crop Monitor 2026
Tech Stack: Python, Vision Transformers, NVIDIA RTX HAL, Dynamic Tiling Engine

- Developed a decentralized Agent-to-Agent (A2A) system leveraging Vision, Analysis, and Coordination agents for real-time crop disease detection across 100+ simulated profiles.
- Engineered an Edge-Computing pipeline optimized for NVIDIA RTX 4050, implementing a customized Dynamic Tiling Engine for high-resolution 640x640 imagery.

Nexus V2: The Sovereign Rebirth 2026
Tech Stack: Python, 4-bit Quantization, C++, HAL 2.0

- Engineered a privacy-first hardware-optimized local AI assistant specifically restricted to execution inside constrained 6GB VRAM environments using 4-bit model quantization layers.
- Implemented a customized Hardware Abstraction Layer (HAL 2.0) responsible for structural thermal management and distribution across 14-core CPU threads.

Gradvora AI: EdTech & Financing Platform 2026
Tech Stack: Next.js 16, TypeScript, Groq API, Scikit-learn

- Engineered a platform guiding Indian students through international matching and predictive admission logic.
- Developed an ML-powered Admission Predictor and ROI Calculator providing 10-year projections.
- Integrated a 24/7 AI Mentor Chatbot using Groq API with gamification mechanics to elevate retention.

Tech Stack: n8n, Google Antigravity, OpenWeatherMap API, Twilio SMS

- Engineered a predictive No-Code/Low-Code early alert architecture to forecast rural environmental disease risks.
- Linked active meteorological streaming JSON elements with localized Twilio SMS push protocols.

LEARNING, LEADERSHIP & ACHIEVEMENTS

- **Advanced Architectures:** Building production-ready systems via advanced LangGraph loops.
- **Hackathon Innovator:** Awarded MMIT participation credentials for rapidly building distributed MVPs.
- **Event Coordination:** Acted as Student Coordinator for the flagship event ETERNITY 2K26.
